COMPANY PROFILE

Aquaz Engineering

Geomembrane lining and water containment,
engineered to last.

aquaz-eng.com

WATER CONTAINMENT SPECIALISTS

Specialists in lining and containment

Aquaz Engineering designs, supplies, installs and tests geosynthetic lining systems for reservoirs, lagoons, pools and landfills across Egypt and the region.

- 01** A single, focused discipline — geomembrane and geotextile systems.
- 02** Full scope delivery, from survey and design through to testing.
- 03** Proven across water storage, agriculture, leisure and environment.

A complete lining service

01

Geomembrane Lining

HDPE and LLDPE liners deployed and welded to specification.

02

Geotextile Protection

Cushioning and separation layers that protect the liner.

03

Reservoirs & Lagoons

Water storage, irrigation and treatment basins of any scale.

04

Pools & Water Features

Decorative and leisure lining with clean, durable finishes.

05

Landfill & Containment

Environmental barrier systems for safe, sealed containment.

06

Testing & Leak Detection

Weld testing and integrity surveys on every installation.

— QUALITY & ASSURANCE

Quality you can verify

Certified welding

Thermal wedge and extrusion welding by trained installation crews.

Tested seams

Air-pressure, vacuum and spark testing across every joint.

Documented integrity

Calibrated equipment and full QA records for each project.

— SELECTED PROJECTS

Built across every scale

Irrigation Reservoir

Large-scale water storage

Resort Pool

Leisure and decorative

Agricultural Basin

Farming and greenhouse

Water Channel

Conveyance and storage

— WHY AQUAZ

Best-in-field work, at a competitive price

Certified crews

Trained installers and proven welding methods.

Long-life liners

Durable systems specified for decades of service.

Verified quality

Every seam tested and documented before handover.

Competitive cost

Premium installation priced below the market.

From survey to handover

01

Survey & Design

Site assessment, levels and a lining design fit for purpose.

02

Subgrade Prep

Grading, compaction and anchor trenching of the basin.

03

Lining & Welding

Liner deployment and welded seams across the surface.

04

Testing & Handover

Leak testing, documentation and a sealed, ready basin.

LET'S BUILD IT TO LAST
